

DERMATOPATHOLOGY Report

Name:	MUSSON, TIMOTHY L.	CASE NUMBER:	M26-052442
D.O.B.:	11/04/1963	AGE: 62 yrs	SEX: M
MRN:	9153966	Date of Procedure:	02/18/2026
Phone #:	(517) 648-7728	Received Date:	02/20/2026
Ordering Provider:	Adam Gomoll, PA-C	Date of Final Report:	02/23/2026
Ordering Location:	2601 Coolidge Rd East Lansing, MI 48823 (517)-203-3000		

Final Pathology Diagnosis

- A. RIGHT RADIAL DORSAL HAND (BIOPSY BY SHAVE METHOD):
BASAL CELL CARCINOMA, SUPERFICIAL TYPE
- B. RIGHT NASAL SIDEWALL (BIOPSY BY SHAVE METHOD):
BASAL CELL CARCINOMA, NODULAR TYPE
- C. LEFT SUPERIOR LATERAL MALAR CHEEK (BIOPSY BY SHAVE METHOD):
MELANOMA IN SITU

Comment: Melanoma in situ extends to the lateral biopsy edge and focally to the base of the biopsy via adnexal extension. There is adjacent superficial basal cell carcinoma. Excision is recommended.

Clinical Information

A)Morphology: 1.3cm bright red non-healing patch
DDX: Neoplasm of Uncertain Behavior
B)Morphology: 8mm ill-defined bleeding patch
DDX: Neoplasm of Uncertain Behavior
C)Morphology: 1.2cm brown and red growing papule
DDX: Neoplasm of Uncertain Behavior

Specimen Information**MICROSCOPIC DESCRIPTION:**

- A. Sections show aggregates of basaloid cells extending from the undersurface of the epidermis into the superficial dermis in a discontinuous pattern.
- B. Sections show aggregates of basaloid cells with hyperchromatic nuclei and scant cytoplasm in a nodular pattern in the dermis.
- C. Sections show an intraepidermal proliferation of atypical melanocytes with hyperchromatic and pleomorphic nuclei. Single cells predominate over nests and demonstrate upward migration. Nests of melanocytes focally protrude into the superficial dermis, but there is no conclusive evidence of dermal invasion in the planes of tissue examined.

Gross:

- A. Received in formalin is a 0.6 x 0.4 x 0.1 cm piece of skin. 2 piece(s) entirely submitted in 1 cassette(s).
- B. Received in formalin is a 0.4 x 0.3 x 0.1 cm piece of skin. 1 piece(s) entirely submitted in 1 cassette(s).
- C. Received in formalin are 2 pieces of skin ranging from 0.6 x 0.4 x 0.1 cm to 0.8 x 0.5 x 0.1 cm. 4 piece(s) entirely submitted in 1 cassette(s).
